GENERAL INFORMATION:

GENERAL INFORMATION:

APPLICANT: Sandhu, Jasbir

TITLE OF INVENTION: Composition Useful For Treatment Of Tumors

FILE REFERENCE: 2537.000007

CURRENT APPLICATION NUMBER: US/10/429,635

CURRENT FILING DATE: 2003-05-02

NUMBER OF SEQ ID NOS: 8

SOFTWARE: Patentin version 3.1

SEQ ID NO 4

LENGTH: 679

TYPE: PRT

XX A
This invention describes a novel antibody that, in aqueous solution, binds selectively to carbohydrate-deficient transferrin (CDT) without having to bind CDT to a solid phase. The invention also describes an antibody that binds selectively to CDT at regions containing the sequences VVARSWGKEDLIWELL, TYEDSIAKIMNGRADAMSLDGGF, SKLSMGSGLMISSEN and YEKYLGEEYWAN (ADG46075-ADG46078) and an immunoassay for detecting CDT using the antibodies of the invention. The antibodies of the invention are monoclonal, specifically from hybridomas DSM ACC2540 or 2541. The antibodies are obtained by immunisation with non-glycosylated transferrin, or a fragment, then generation of hybridomas by standard fusion of spleen and myeloma cells. Hybridomas are then selected for
                                                                                                                                                                                                                                                                                                                                      New antibody specific for carbohydrate-deficient transferrin, useful for diagnosis of alcoholism, can bind its target in solution, eliminating
                                                                                                                                                                                                                                                                        Claim 4; SEQ ID NO 3; 21pp; German.
                                                                                                                                                                                                                                                                                                                   need for immobilization.
                                                                                                                                                                                                                                                                                                                                                                                                        WPI; 2004-073743/08.
                                                                                                                                                                                                                                                                                                                                                                                                                                                    Althaus H;

The antibodies are useful for diagnosis of alcoholism, CDT, which lacks glycosylation at Asn413 and/or Asn 611, is present only in alcoholics. The antibodies allow direct detection of CDT in solution, eliminating the need for immobilising it on a solid phase (as required when using known antibodies). ADG46075-ADG46094 represent CDT peptide fragments used in the method of the invention.
                                                                                           The present invention describes an assay for a protein having at least two isoforms with different glycosylation patterns. The assay involves contacting a sample containing the protein with a proteolytic enzyme, followed by detecting the content or relative content of at least one peptide fragment produced by proteolysis. Also described is a kit for the assay method comprising the proteolytic enzyme and a substrate bound specific binding partner (S1) for at least 2 of the isoforms of the proteins. The method can be used for assaying isoforms of proteins according to their glycosylation pattern to determine their concentration or relative concentration in the sample or material (e.g. blood). The method avoids use of antibodies for distinguishing between glycosylated isoforms of the proteins. The present sequence represents a transferrin peptide fragment which is used in the exemplification of the present
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 Disclosure; Page 15; 30pp; English
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            Assay for differentiating protein isoforms to determine their concentrations in sample e.g. blood, involves contacting the sample with proteolytic enzyme to produce peptide fragment by proteolysis followed by
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             WPI; 2004-625547/60
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       Synthetic

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    Matches
                                                                                                                                                                                                                                                                                                                                            The present invention describes an assay for a protein having at least two isoforms with different glycosylation patterns. The assay involves contacting a sample containing the protein with a proteolytic enzyme, followed by detecting the content or relative content of at least one peptide fragment produced by proteolysis. Also described is a kit for the assay method comprising the proteolytic enzyme and a substrate bound specific binding partner ($1) for at least 2 of the isoforms of the proteins. The method can be used for assaying isoforms of proteins according to their glycosylation pattern to determine their concentration or relative concentration in the sample or material (e.g. blood). The method acoids use of antibodies for distinguishing between glycosylated isoforms of the proteins. The present sequence represents a transferrin peptide fragment which is used in the exemplification of the present
                                                                                                                                                                                                                                                       Sequence 15
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   Disclosure;
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           Assay for differentiating protein isoforms to determine their concentrations in sample e.g. blood, involves contacting the sample with proteolytic enzyme to produce peptide fragment by proteolysis followed by
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                06-FEB-2003; 2003GB-00002740
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          06-FEB-2004; 2004WO-GB000480

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        United States alone. Current approaches to treat the disease include the use of non-steroidal antinflammtory drugs (NSAIDS), which may reduce pain, swelling and inflammation, and disease-modifying anti-rheumatic drugs (DMARDS), which act to slow the progression of the disease and avoid further joint injury. These drugs are associated with a number of serious side effects and the search for improved therapeutics is a subject of active research. The marker of the invention demonstrates antiarthritic activity and may be useful in preparing a composition for diagnosing or treating rheumatoid arthritis. The current sequence is that of a human rheumatoid arthritis marker peptide of the invention.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         The invention relates to a novel isolated marker for rheumatoid arthritis selected from one of many (around 400) markers defined in the specification. Rheumatoid arthritis is a chronic inflammatory disorder of the small joints which is estimated to affect 2.1 million people in the
                                                                                                                                                                                                                                                                                          Human rheumatoid arthritis marker peptide - SEQ ID 180.
                                                                                                                                                                                                                                                                                                                                                       16-DEC-2004
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       Sequence 15

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   The invention relates to a novel isolated marker for rheumatoid arthritis selected from one of many (around 400) markers defined in the specification. Rheumatoid arthritis is a chronic inflammatory disorder of the small joints which is estimated to affect 2.1 million people in the united States alone. Current approaches to treat the disease include the use of non-steroidal antiinflammatory drugs (NSAIDS), which may reduce pain, swelling and inflammation, and disease-modifying anti-rheumatic drugs (DMARDS), which act to slow the progression of the disease and avoid further joint injury. These drugs are associated with a number of serious side effects and the search for improved therapeutics is a subject of active research. The marker of the invention demonstrates antiarthritic activity and may be useful in preparing a composition for diagnosing or treating rheumatoid arthritis. The current sequence is that of a human rheumatoid arthritis marker peptide of the invention.

The transferrin binding molecule of the invention is useful for preventing and treating bacterial infections (e.g. bacterial meningitis and otitis media). The present amino acid sequence represents a region of the human transferrin protein that is recognized by a bacterial transferrin binding protein.
                                                                                                                                                                                                                                                                                          The invention comprises a molecule (e.g. peptide) which is capable of: binding to a region of a transferrin protein that is recognized by a bacterial transferrin binding protein; and eliciting an antibody to the bacterial transferrin binding protein.                                                                                                                                                                                                                                                   Query Match
                                                                                                                                                                                                                                                                                                                The invention relates to a novel method for analyzing a mixture of proteins. The method involves selecting sets of peptides from several peptides, sequencing one or more portions of the peptides in two or more sets of peptides, to produce a data set, and determining the likelihood of the presence of two or more proteins in the mixture of proteins based on two or more data sets. The invention further comprises an article of manufacture comprising a computer-readable media with computer-readable instructions for carrying out the method. The method is useful for analyzing a mixture of proteins. The method is useful for seriening and characterization of protein mixtures. This sequence represents a human serum albumin (HSA) peptide fragment used in the novel protein analysis

                                                                                                                                                                                                                                                                                           The present sequence is a synthesised peptide of human prothrombin kringle-2 protein which is derived from human plasma prothrombin. Peptides were synthesised having amino acid sequences in order from N-terminal sequence of prothrombin kringle-2 by overlapping 2-5 amino acids of both N-terminal and C-terminal of peptides. These peptides were purified by high performance liquid chromatography (HPLC). Kringle domains from prothrombin have anti-endothelial cell proliferation and anti-tumour activities. These inhibit angiogenesis which is involved in tumour growth. They are also useful for the treatment of cancer, e.g. skin, laryngeal, uterine, colon, lung and bone marrow cancer. The human prothrombin kringle-2 significantly suppresses tumour growth in vivo
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 Human prothrombin kringle-1 and kringle-2 polypeptides that inhibit angiogenesis, useful for treating cancer.

Competition relates to the use of at least one set of peptides in the individual peptides of a medicament for modulating an immune response, where a minimal acid sequence corresponding to a single polypeptide of interest and competite of the same set of peptides (i.e. they are overlapping). Also included are an antigen-presenting cell which has been contacted with the competites for modulating an immune response to a polypeptide of interest, a competite for modulating an immune response to a polypeptide of interest, a competition for modulating an immune response to a polypeptide of interest, a competition for modulating an immune response to a polypeptide of interest, a composition comprising at least one set of the peptides (and a carrier and/or compising at least one set of the peptides (and a carrier and/or composition of matter for modulating an immune response to a polypeptide of interest cof the peptides, a method for treatment and/or prophylaxis of a disease condition associated with the presence of a polypeptide of interest cof and a composition of matter for modulating an immune response to a polypeptide of interest can accordance or condition associated with the presence of a polypeptide of interest can accordance or condition associated polypeptide that is a polypeptide cof protozoans and mycoplasmas. The polypeptide that is a polypeptide composition or a pathogenic organism or a cancer, and produced by a pathogenic organism or a cancer and produced by a pathogenic organism or a cancer, occur, post transplant cof protozoans and mycoplasmas. The disease ro condition associated cancer, bladder cancer, bladder cancer, bladder cancer, because, post transplant cof a medicament for the treatment of a disease or condition is associated with the presencing cells or their precursors are useful in the presencing or a medicament for the treatment of a disease or condition is associated with the presence of the target antigen to be protozoans and mycoplasmas protosessed or modified form of the antigen to organi

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 Antibody production against allergenic antigen (Ag) is specifically suppressed by treatment with the junctional segment of the alpha and/or beta chain of the Ag receptor of suppressor T (Ts) cells (TCR) induced by tolerogenic Ag-PBG conjugates. Induction of antigen-specific suppression by treatment of mice with TCR alpha-chain peptides was demonstrated using the peptides given in AAR62912-17. The peptides of AAR62914 corresponds to the J-alpha region of the CDR3 segment of the alpha chain of ovalbumin-specific Ts cells. (Updated on 25-MAR-2003 to correct PN field.)
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       complementarity determining region; immunosupprantibody engineering; suppressor T-lymphocyte; monoclonal antibody; myeloma; IgG.

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  AAR94773-R94878 are overlapping peptides of a library spanning the whole of microbial hsp65 (heat shock protein 65). Eleven antigens were prepared from the library and used to immunise mice, after 10 days the mice received injections of pristane to induce arthritis and the animals examined for incidence of arthritis. A preferred anti-arthritic peptide was found to correspond to residues 21-31 of full length hsp65 (see AAR94772). Peptides conty. this sequence are used in the diagnosis, treatment and prophylaxis (may be used in a vaccine) of autoimmune diseases such as rheumatoid arthritis
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              rulypeptide derived from bacterial heat shock protein 65 - f diagnosis, prophylaxis and treatment of auto-immune disease rheumatoid arthritis.
                                                                                                                                                                                                                                                                                                                                                                   Heat shock protein; hsp58; autoimmune disease; hsp65; vaccine; rheumatoid arthritis; antigen; infectious disease; prophylacti

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           This peptide is one of a library (see AAW43451-W43556) which represents the mycobacterial heat shock protein, hsp65 and is designed to study a novel method for the treatment of autoimmune disease e.g. rheumatoid arthritis. This fragment has been allocated as a group 10 peptide which is composed of the fragments found in AAW43541 to AAW43550. Mycobacterial hsp65 is known to be an immunodominant antigen in a number of infectious diseases and is linked to pristane induced arthritis (PIA) in vitro, however heat shock proteins and peptides derived from microbial sources may act as self antigens and thus have limited clinical use. The human hsp65 homologue, hsp55, or fragments of the hsp58 protein (see AAW14948-W14950) may be useful in the development of vaccines for prophylaxis or treatment of an autoimmune disease such as rheumatoid arthritis. (Updated on 27-AUG-2003 to correct OS field.)

$26527

T-cell receptor alpha chain V region (clone Cw3/A8, A3/74.1) - mouse (fragment)
C;Species: Mus musculus (house mouse)
A;Variety: clone Cw3/A8, A3/74.1
C;Date: 11-Mar-1998 #sequence_revision 17-Apr-1998 #text_change 17-Mar-1999
C;Accession: $26527; PH1442

         Pred. No. is the number of results predicted by chance to have a score greater than or equal to the score of the result being printed, and is derived by analysis of the total score distribution.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           DB

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            central domain (By similarity).

DOMAIN: A long coiled coil structure formed by 3 polypeptide chains connects the central nodule to the C-terminal domains (distal nodules). The long C-terminal ends of the alpha chains fold back, contributing a fourth strand to the coiled coil
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       PTM: Conversion of fibrinogen to fibrin is triggered by thrombin, which cleaves fibrinopeptides A and B from alpha and beta chains, and thus exposes the N-terminal polymerization sites responsible for the formation of the soft clot.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          SUBUNIT: Heterohexamer; disulfide linked. Contains 2 sets of 3 nonidentical chains (alpha, beta and gamma). The 2 heterotrimers are in head to head conformation with the N-termini in a small

Microbiol. 153:89-98(2002).
-!- FUNCTION: Conjugation of reduced glutathione to a wide number of exogenous and endogenous hydrophobic electrophiles.
-!- CATALYTIC ACTIVITY: RX + glutathione = HX + R-S-glutathione.
-!- SUBUNIT: Monomer and homodimer.
-!- SUBUNIT: Monomer and homodimer.
-!- SUBUNIT: MONOMER and homodimer.
-!- SUBUNIT: MONOMER and to the GST superfamily.
